Art Unit: 3682

1. The following is an examiner's statement of reasons for allowance: The prior art, taken as a whole, does not teach or render obvious to one having ordinary skill in the art a crank shaft bearing:

"wherein axes passing through centers of the predetermined spaces are concentric before the cylinder head and a cylinder head gasket are mounted on the cylinder block, wherein an axis passing through a center of at least one of the predetermined spaces is deviated from a given reference straight line in a direction orthogonal to the reference straight line due to elastic bending deformation of the cylinder block when the cylinder head and the cylinder head gasket are mounted on the cylinder block, and

wherein a thickness, in a direction parallel to the direction in which the axis is deviated, of one of the upper metal and the lower metal, which is positioned in the same direction as the direction in which the axis is deviated, is increased by an amount by which the axis is deviated from the reference straight line, and a thickness, in the direction parallel to the direction in which the axis is deviated, of one of the upper metal and the lower metal, which is positioned in a direction opposite to the direction in which the axis is deviated, is reduced by an amount by which the axis is deviated from the reference straight line." (Claim 1)

"wherein a thickness of each of the upper metal and the lower metal is formed such that a center of the inner periphery is deviated, while the upper metal and the lower metal are combined, with respect to a center of the outer periphery." (Claim 10)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

4,450,797 shows a bearing for a diesel engine, eccentric for altering compression ratio.

6,247,430 shows a bearing for altering compression ratio.

2002/0043229 shows a bearing for altering compression ratio.

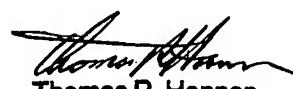

4,311,349 shows a bearing having clearances for relieving stress.
